**What is our new fully-funded
business program?**

What is our new fully-funded business program?

A dedicated programme to help your business stay secure from online crime through education, training and 1-2-1 support.

Who is our new fully-funded business program for?

Any small business based within Greater Manchester can apply.

You do not have to be a company that operates online to access the support.

What is required to take up a place on our fully-funded business program?

A deep understanding of cyber security, online or digital technology is not needed.

We want to help educate your staff and help you to increase awareness of the latest cyber threats that come with running a business online.

What is the benefit of this program to my company?

The pandemic has seen a 400% increase in reports of cyber fraud with small businesses finding themselves at the greatest risk and without access to relevant, affordable and trusted support.

This program will help to protect businesses against online crime at a time when suffering an attack could mean the difference between a business staying open and closing down.

What do you get by joining this program?

Business Starter Membership - This 12-month membership (usually £500) includes Security Awareness Training (for two members of staff).

Cyber Security Policy & Procedure Templates - This documentation ensures your business has the most recent cybersecurity policies and procedures in place.

1-2-1 Security Consultation - This consultation (up to 1 hour) allows us to work with you to review what current security measures you have in place & answer any questions you have about cyber security.
